

TCS delivers tailored solutions backed by a dedicated engineering team that supports you from concept through integration and long-term support. Instead of a one-size-fits-all system, we draw on thousands of proven designs to create antenna systems that are precisely tuned to your RF, environmental and performance requirements.

Our antenna portfolio spans small 4-foot (1.2-meter) to large 43-foot (13.2-meter) aperture systems. We have elevation-over-azimuth systems. We also deliver XY and 3-Axis Systems when you need to get those overhead passes. Our feeds have simultaneous left-hand and right hand circular or linear feeds that rotate for maximum gain.

WHAT WE DO

ANTENNA TYPES

FEEDS

FEED BANDS

L | S | C | X | Ku | Ka

CONFIGURATIONS

Single band | Multi-band | Custom Solutions

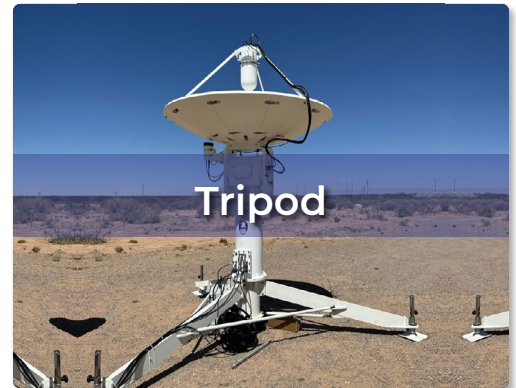

TRACKING

Pointing & Step-track | Auto Tracking

FUNCTION

Receive/Transmit

OPTIONS

100% DESIGNED & BUILT IN THE USA. SUPPORTED WORLDWIDE.
